

The Rope Lights Install

03/22/2012

First the old 300W Flood light had to go. It hadn't worked in many moons, when it did the neighbors were blinded. The motion detector went off every time a leaf fell from a tree.

Next I put a plug head on the end of the Romex (not an easy task).

Then, I plugged the remote controller and LED string together. I proceeded to tape the connections to prevent the stuff from coming unplugged. Looks like a mess. It wouldn't fit in the hole so I had to figure some way to hide this mess. First step, make it neat up against the ceiling.

I needed to hide the now neat mess. I found an old plastic paint tray and cut it in half.

The completed project turned out very nice.

Until The Next Project
